

Slow-Cooker Sweet Potatoes

Makes 10 servings

An easy way to prepare a large batch of sweet potatoes or yams is by using a slow cooker.

Ingredients:

- 10 small sweet potatoes

Variations:

- Alternatively, wash, dry, and cook for 45-60 minutes in a 350 F oven until tender when pierced with a skewer.
- While big white russet potatoes might raise blood sugar for some, and fried potatoes are too high in calories, all the other varieties such as red, white, purple fingerling, new, yam, and sweet potatoes are EXCELLENT choices of fuel for body and brain. They are high in vitamin C, potassium, fiber, vitamin B6, and minerals.
- A sprinkle of cinnamon, salsa, or plain soy yogurt are good topping choices.

Directions:

Wash and place as many damp sweet potatoes as desired into the slow cooker. Cook on low a minimum of six hours and up to eight depending on the size of the potatoes you are cooking.

Per serving: 103 calories, 2.3 g protein, 23.6 g carbohydrate, 7.4 g sugar, 0.2 g fat, 1.5% calories from fat, 3.8 g fiber, 41 mg sodium

Toasted Brown Rice

Makes 3 servings

Flavorful and satisfying, brown rice is an excellent source of protective soluble fiber. In the cooking method described below, the rice is toasted, then simmered in plenty of water (like pasta) to enhance its flavor and reduce its cooking time.

Ingredients:

- 1 cup dry short- or long-grain brown rice
- 4 cups boiling water
- 1/2 teaspoon salt (optional)

Variations:

- Alternatively, rice can be prepared in a rice cooker by following the manufacturer's directions.
- Instead of rice, use sweet potatoes.

Directions:

Rinse rice in cool water. Drain off as much water as possible. Place rice in a saucepan over medium heat, stirring constantly until completely dry, 3 to 5 minutes. Add boiling water and salt, then cover and simmer until rice is just tender, about 35 minutes. Pour off excess liquid. (This can be saved and used as a broth for soups and stews if desired.)

Per serving: 229 calories, 5.3 g protein, 47.5 g carbohydrate, 0.7 g sugar, 1.9 g fat, 7.3% calories from fat, 6.9 g fiber, 403 mg sodium (if adding salt)

Dear Cooking Class Participant,

Welcome!

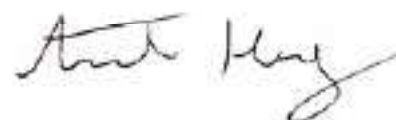

This class will help you better understand the connection between nutrition and diabetes, teach you how to prepare delicious and healthful meals, and direct you to additional resources for more information. The program that you are about to participate in was developed by the Physicians Committee for Responsible Medicine (the Physicians Committee), a 501(c)(3) nonprofit health organization with the goal of advancing diabetes prevention and reversal through nutrition education and research.

This *Food for Life: Diabetes Initiative* program was developed by Neal Barnard, MD, president and founder of the Physicians Committee, along with staff diabetes educators, nurse practitioners, and registered dietitians. It is based on the findings of the Physicians Committee's National Institutes of Health-funded research study that showed the effectiveness of a low-fat plant-based diet for diabetes prevention and management. Additionally, the program teaches patients how to follow a dietary pattern (plant-based) that is supported by the American Diabetes Association in their *Standards of Care in Diabetes*.

Information presented in the class and through the materials is not intended to be a substitute for professional medical advice, diagnosis, or treatment. Always seek the advice of your physician or other qualified health professional for any questions you may have regarding a medical condition.

Thank you for participating in this educational program.

Kind regards,

Anna Herby, DHSc, RD, CDE
Nutrition Education Specialist
